

JP2001128728A2: DEPILATING DEVICE

Title: Hair remover for cosmetic treatment, judges press power applied on skin during hair plucking and controls press power accordingly

PROBLEM TO BE SOLVED: To provide a depilating device capable of being used with an optimal pressing force and being used with the depilating surface of a cylinder correctly in contact with the skin.

SOLUTION: A main body casing 1 with a grip part to be gripped with a hand comprises both a depilating means provided with a plurality of claws 3 to be opened and closed for catching the hairs and pulling out the hairs by rotation or rotational movements and a motor 11, which is a drive source. The main body casing 1 is constituted in such a way as to detect the pressing force of the depilating means against skin at the time of depilation, comparing it with a specific value, determining an appropriate state of use, and activating a drive control means or a display means.
